assistive technology *facts*

Funding Assistive Technology

John, a Medicaid-eligible student, attends a school that is a Medicaid provider. By combining Medicaid and school funds, John acquired a communication device and the training he needed to use it.

Funding assistive technology (AT)

Funding AT depends on a child's age and the kinds of support services for which he or she is eligible. Parents can become the expert on their child's AT needs and possible funding sources. Other parents, professionals and organizations can help you learn about and obtain AT funding.

Funding AT through Medicaid

If assistive technology is medically necessary, children from birth to age 21 may be able to obtain AT through Medicaid/Dr. Dynosaur. The Medicaid program may call AT devices durable medical equipment, prosthetic devices or equipment related to rehabilitative therapy, such as speech-language or physical therapy.

Medicaid can also pay for assistive technology services, including an evaluation to determine what type of AT is needed or a consultation and training in the proper use and maintenance of the equipment.

Since Medicaid is a complicated system, it may be helpful to talk with another parent or professional about the application process.

If Medicaid rejects a request for AT, parents have the right to appeal. For more information about the Medicaid appeal process, contact your local Disability Law Project.

Funding AT through special education

Children ages 3 to 22 with disabilities may have assistive technology written into their IEP (Individual Education Program) or, for children birth to age 3, into their IFSP (Individualized Family Service Plan).

For assistive technology to be part of a child's education plan, the team must decide that an AT device or service is necessary to help a child

- meet goals or objectives
- benefit from their special education program
- be in the regular classroom.

*Discovering
your family's
options is
one of the
first steps
toward fund-
ing your
child's AT
needs.*

About our copyright

We are always happy to hear that our materials are appreciated and used by others. However, if you wish to reproduce any of these materials, please contact us for permission before you do so in order that we may accurately report dissemination and usage to our funding agencies.

When AT is included in the IEP, it is provided at no cost to parents unless other arrangements are made. With parents' permission, AT costs can be billed to Medicaid or private insurance. Under an IFSP, parents may be asked to pay for some or all AT costs.

Funding AT through Section 504

For children with disabilities who are not eligible for special education and who need assistive technology, funding may be provided under Section 504. Through a 504 plan, children can receive AT devices and/or services to help them participate in preschool or school-based activities at no cost to parents.

Funding AT through Vocational Rehabilitation

Vocational Rehabilitation can pay for assistive technology for students or adults with disabilities when the technology is related to reaching employment goals. The AT must be included in the IWRP (Individual Written Rehabilitation Plan). Starting as early as age 14, parents can explore Vocational Rehabilitation as a source of AT funding.

Other possible sources of AT funding

Other possible funding sources include private insurance, community service groups, foundations and organizations dedicated to specific disabilities.

More information about funding AT can be found at the following resources.
